## LOUVRE HARDWARE

### NEW CONSTRUCTION:

Screw louvre hardware channels to the window jambs. Be sure that channels are installed plumb and square. The outside edge of the channels should be at least 1-1/4" from the outside screen stops to allow clearance if a screen is used.

**1.** Cut the top and bottom glass stops exactly 1-1/4" less than the window opening width and screw in place between the louvre jambs. The bottom stop may be shimmed level on sloping sills by placing a wood bead of molding under the outside edge.

**2.** Insert glass slats in the clips from the inside and slide gently into place. Length of glass slats should be exactly 1-1/2" less than the window opening width before the louvre hardware is installed.

### MULLIONS:

If the opening is wider than 42", two or more units must be used. In lieu of a wood mullion divider, two jambs may be mulled together by screwing a 1" x 1" mullion anchor block to the head and sill. Left hand and right hand jamb channels are then bolted together over the anchor blacks to form a sturdy union.

### LOUVRE GLASS

4" CLEAR— 36" (#G36C) & 48" (#G48C)

4" OBSCURE—48" (#G48O)

25 PIECES PER CARTON & SOLD BY THE PIECE
